STONE LEGENDS

From Shapes to Part to Units:

Stone Legends Profiles are the basic DNA needed for creating new designs in cast stone.

Customization with Profiles will add new dimensions to your design process.

Searching for Units

The **Stone Legends Catalog** is designed and organized with the Internet in mind. Therefore, searching the catalog can range from a broad search down to a specific search. This also means that there is more than one way to search for units.

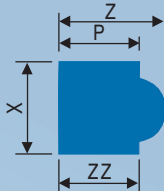

This catalog is centered on units, so the first thing to do is familiarize yourself with the **Unit List**, shown above. The unit list contains all of the key elements that this catalog's organization and structure are based upon, as well as everything that you need to know about a unit.

The unit search path is also based on the Unit List and the nomenclature that it is derived from. With each step taken, you narrow your search field by disregarding Units that do not fit the parameters.

Unit List

Profiles are arranged by height (X).

Use the Unit ID when ordering

Type Description Profile	Primary View	View Modifiers	Surname	Unit ID	Cost	Factor/Lf	Weight/

A Product Chapter holds many kinds of units. By narrowing your search path to a specific Unit Type Description (Entries) and a specific Primary View (CircleTop), you can narrow the search down to the units that will fit your project.

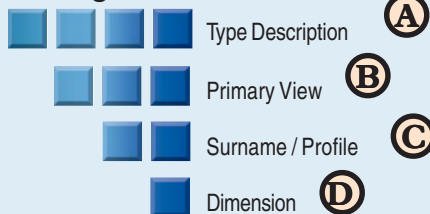

The Organization Guide, below, is displayed in the introduction to each chapter. The numbers to the left will show the order in which each chapter is organized.

Organization Guide

Browse through the Profile Unit Lists to locate the exact shape and outline for your parts, refer to index for locations.

Select the desired profile from the unit list. When you contact Stone Legends, have the Unit ID of the profile, a list of parts to be made, and the calculated linear footage for each part. Stone Legends will respond with an estimate.

Organization Guide

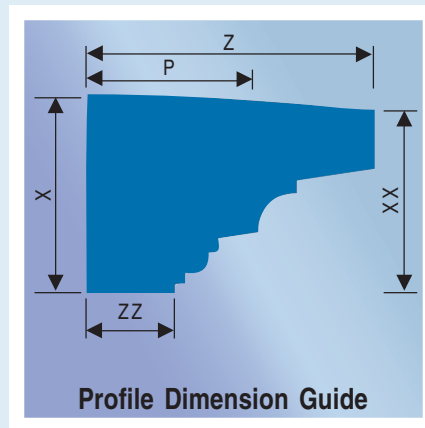

Listed below are available catalog options as shown in this chapter. Refer to page 6 for a complete list of available TypeDescriptions, PrimaryViews and Modifiers.

Pricing Legend

Profile costs are calculated based on an **Linear Foot** basis.

Refer to the **Stone Legends Pricing Legend**, located as an insert at the back of the catalog, for more information on calculating stone costs for catalog units.

Costs are based on standard parts, custom parts require additional charges as shown in this chapter.

- X** Maximum height of the visual face (elevation).
- XX** On a sloped profile, the vertical portion of the profile from the slope.
- Z** Maximum depth of the profile 90° perpendicular to the visual face (plan view).
- ZZ** Setting bed at the bottom of the profile to match up to a lower profile. *This dimension can vary without affecting the visual face, the "X" dimension, of the profile.*
- P** Second setting bed at the top of the profile that will interact with an upper profile or the exterior building material. *This dimension will vary with the "Z" and "ZZ" dimension of the profile.*

STONE LEGENDS

Profiles - The DNA of Stone

The Profile

Profiles are the DNA, or basic building blocks, of cast stone.

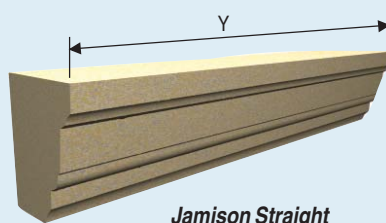

Jamison Profile

A profile is the basic two-dimensional shape composed of a height (X) and a depth (Z).

The Extrusion

By adding a length (Y), the third dimension, a profile shape is converted into an extrusion.

Jamison Straight Extrusion

Extrusion to Part

The basic concept of the profile extrusion forms the foundation on which all cast stone design and production techniques are built.

Once a profile extrusion has been designed and developed, the required production tools can be created to produce a cast stone part identical to the extrusion.

After the cast stone part is produced, it can be used alone or with other parts to create a logical masonry assembly, or Unit.

The Part

Each cast stone part is identified using a basic nomenclature that is ruled by the part's usage.

At the most basic level, a profile extrusion follows a straight line or a radius.

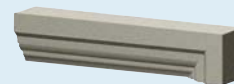

Jamison Extrusion; Straight.

Jamison Extrusion; Radius.

A change in the vertical plane of a profile extrusion is called a Turn. A turn can be placed up or down.

An Inside Turn will pivot around the bottom of the profile.

Jamison Extrusion; Inside Turn.

An Outside turnor pivots around the top of the profile.

Jamison Extrusion; Outside Turn.

Parts that change direction on the horizontal plane are called Copes.

Jamison Extrusion; Outside Cope.

Jamison Extrusion; Inside Cope.

Statuary	Straight
Tabletop	Turn
TurnDown	TurnUp
Urn	Volute
Wishbone	

Primary View

The next step in identifying a part is to recognize its basic look or "Primary View".

The following is a list of part Primary Views developed by Stone Legends, current at the date of publication.

Angle	Animaleer
Asymmetrical	Backed
Ball	Bowl
Busts	Cope
Cross	Down
Ears	Entasis
Flattop	Fluted

Stock / Custom Parts

Stone Legends produces stone to order, however, certain parts are carried as stock tooling in order to speed up the production process. These parts do not require setup fees. Note that modifiers are options and will not be used except to modify the basic part. Custom parts, on the other hand, do require setup fees based on the customization of the profile outline and the complexity of the tooling involved.

Profiles - The DNA of Stone

The Unit

Parts based on Profile Extrusions can be used to create any number of Units. For example, multiple parts based on the Jamison Profile Extrusion (as described on page 413) can be assembled to create midline wall banding, as shown below.

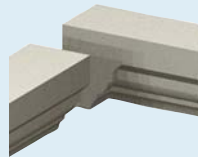

Jamison Midline Banding; Straights, Cope Outside Rights, Cope Outside Lefts, Cope Inside Rights, and Cope Inside Lefts.

In addition, a single profile could be used to design other types of custom parts that could be assembled into more complex Units.

The Unit - Complex

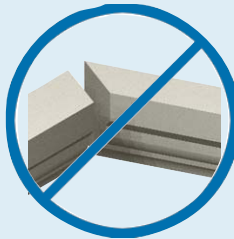

Parts based on Profile Extrusions can also be combined with other Profile Extrusions to create complex Units. Using various stacking and connection methods, these combinations can dramatically change the usage and scope of the basic part.

Connection - Horizontal

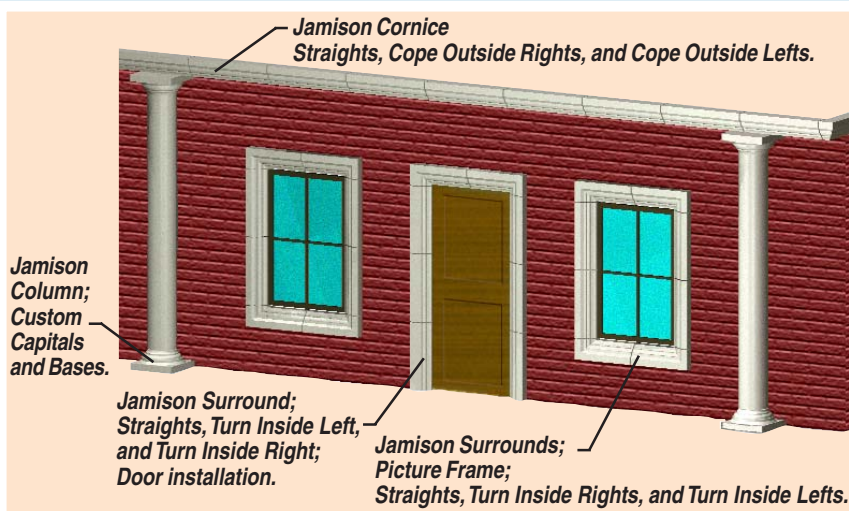

Inside Cope Connection.

In both Turns and Copes, the connection is included in the tooling that is required to make the part.

Mitered Corner Connection.

This connection simplifies the assembly of the Unit as the installer will not need to field cut mitered joints.

Designing With Profiles

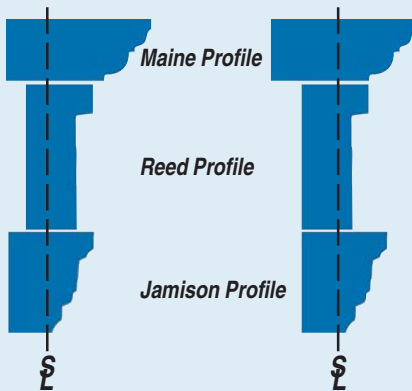

Profiles can be used individually, or in combination with other profiles. Stacking profiles adds unlimited options and styles to your design concepts. Since profiles can be extruded and used for basically any part imaginable, your design concepts can easily be displayed throughout your project.

Dimensions become a critical factor when designing and installing Units using on multiple Profile Extruded Parts.

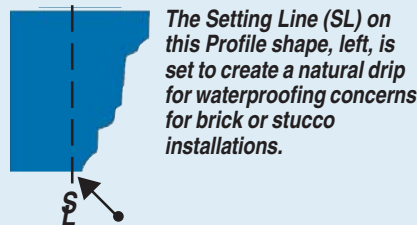

SL - Setting Line

When designing with profile extrusions, the alignment of Parts during installation can dramatically effect the final style of the Unit.

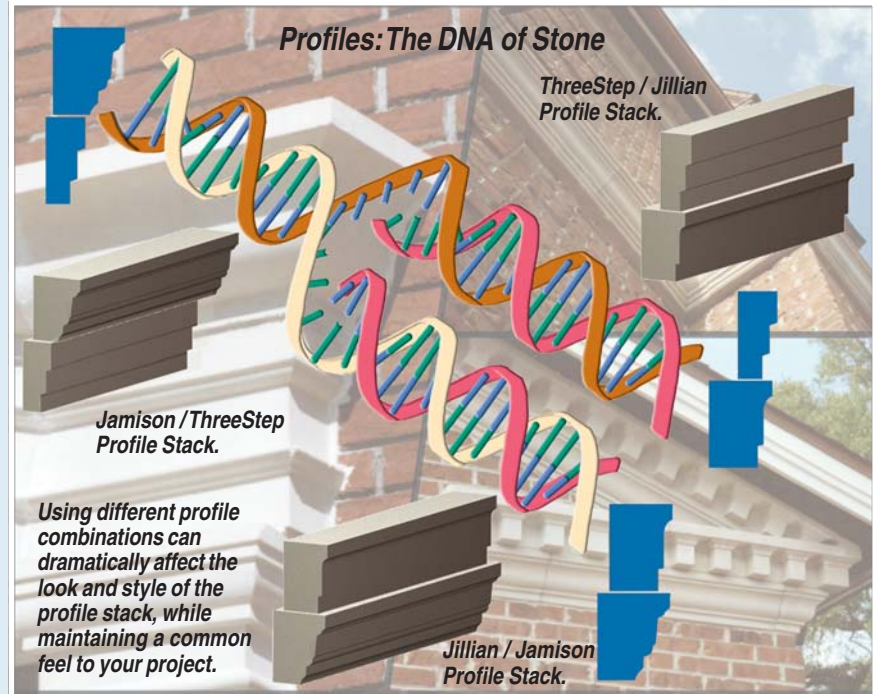

A Setting Line (SL) is used to identify a specific point in which to control the installation of the Parts. Depending on the installation of the Parts, the Setting Line can be based on several controlling factors, for example: face of wall, drips, and controlling Profile shapes.

The Setting Line (SL) gives a controlling point in which to align Profile shapes. Note that the back of the shapes do not need to align.

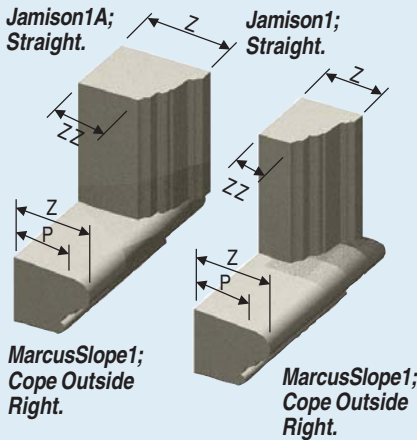

The Setting Line (SL) on this Profile shape, left, is set to create a natural drip for waterproofing concerns for brick or stucco installations.

Connection - Vertical

Dimensions of profiles become critical, particularly when connecting different Profile Extrusions to make complex units.

The example, above, shows how two very similar Profile Extrusions can interact differently with a second Profile Extrusion. In this situation, the Jamison1 Profile's depth (Z) is better suited to work with the

MarcusSlope1 Profile's setting bed (P). Without adjustment, the Jamison1A would extend past the MarcusSlope1 Profile's depth (Z).

Putting it all Together

Complex Units can include hundreds of parts that have been based on Profile Extrusions. A perfect example is the Warwick Manor Entry, shown on opposite page, which includes over 100 Parts based on only 11 Profile shapes.

STONE LEGENDS

Legend / Profile Shape Chart

Profile Names

Profile shapes vary considerably. To make them easy to find, Stone Legends names profiles based on their outlines. Similarly shaped profiles have similar names. Many Profiles are grouped into families. These families can be large, holding many variations of the shape, while some may have few variations.

Using the **Stone Legends Profile Shape Chart**, each profile is categorized by the basic shape of the outline. New profiles are then named by starting with the first one or two letters of the Shape Category.

For example, if a profile's name starts with a "B", it will resemble either the "Bullnose" with a round bead, or the Batten with a square bead.

A numerical expression after a Profile name indicates a closely related Profile with different dimensions. **Bolson1** closely resembles **Bolson8**, but it is a different size or is slightly different in the outline.

A Belton1 on the other hand, will have the bullnose or batten look, but will not closely resemble the Bolson Profile except for that feature.

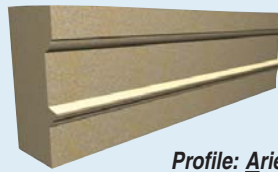

With this method of naming, you have a simple way to search for the shapes or sizes that interest you are most.

Legend - Profile Names

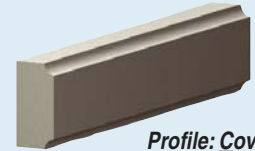

The following describes the shape naming convention and displays examples of the 2D Profile shape and a 3D extrusion example.
