Typical Column Styles

Corinthian Columns

Corinthian columns are the most elaborate order of Greek architecture, distinguished by slender shafts and inverted bell shaped capitals, decorated with acanthus leaves and volutes. The ratio of the shaft base diameter (in inches) is approximately equal to 1.25 times the height (in feet) for tapered shaft columns and 1.0 for straight shaft columns. Shafts are available in smooth or fluted surface.

Corinthian Capital

w/ Verona Base

Ionic Columns

One of the three orders of columns developed by the Greeks, Ionic column capitals are rectangular and use highly decorated spiral volutes. The ratio of the shaft base diameter (in inches) is approximately equal to 1.25 times the height (in feet) for tapered shaft columns and 1.0 for straight shaft columns. Shafts are available in smooth or fluted surface.

Verona Base*

Doric Columns

Roman Doric columns are quite classical in the Roman order of architecture. They have simple lines, heavy shafts and undecorated capitals. The ratio of the shaft base diameter (in inches) is approximately equal to 1.5 times the height (in feet) for tapered shaft columns and 1.28 for straight shaft columns. Shafts are available in smooth or fluted surface.

Typical Column Styles

Scamozzi Columns

The Scamozzi is an Ionic style developed in Renaissance Italy with slender shafts, and capitals that use ornamental scrolls (spiral volutes). The ratio of the shaft base diameter (in inches) is approximately equal to 1.25 times the height (in feet) for tapered shaft columns and 1.0 for straight shaft columns. Shafts are available in smooth or fluted surface.

Scamozzi Capital w/ Verona Base

Tuscan Columns

Tuscan columns are from the Roman order of architecture and have a heaviness to their shafts and simple, ring-like capitals with no decoration. The ratio of the shaft base diameter (in inches) is approximately equal to 1.5 times the height (in feet) for tapered shaft columns and 1.28 for straight shaft columns. Shafts are available in smooth or fluted surface.

Tuscan Capital w/ Tuscan Base

Temple of the Winds Columns

Temple of the Winds columns are beautifully decorative, using acanthus and other leaves to support the top. The ratio of the shaft base diameter (in inches) is approximately equal to 1.25 times the height (in feet) for tapered shaft columns and 1.0 for straight shaft columns. Shafts are available in smooth or fluted surface.

Temple of the Winds Capital w/ Verona Base

Verona Columns

Verona columns are not of any particular architectural order. They have slender shafts similar to the Corinthian and Scamozzi styles, with an undecorated capital for a simple clean look. The ratio of the shaft base diameter (in inches) is approximately equal to 1.25 times the height (in feet) for tapered shaft columns and 1.0 for straight shaft columns. Shafts are available in smooth or fluted surface.

Design Options Pilaster

Typical Applications for Pilasters

Pilasters of various shapes and sizes can be combined to create an impressive look.

These Pilasters were placed against a backing panel for a more solid look

Pilasters and a lintel were used to transform this ordinary door into a great Entry

Pilasters were used as a window surround on this house.

Design Options Pilaster

Typical Applications for Pilasters

A beautiful example of how an entry can be constructed using a Lintel and a pair of Ariel Flute Pilasters

This entry was created with a Lintel, some panels and simple but elegant Pilasters

Note the Recess Pilasters on Plinth Blocks and Brackets below the Lintel

Note the Pilasters Between the Windows and on the Entry of the House
