

Balustrade Design Options

Methods to finish Balustrade

Newels can be used where the balustrade needs to change direction. It is not always necessary to use a newel when creating a turn but it does add a beautiful finishing touch.

Standard Balustrade finished into Newel Pier Shaft

Balustrade finished into Pass Thru Newel Pier Cap

There are various options available to finish balustrade. Examples shown above include a volute end and a finished end. Also shown is where the balustrade terminates into a newel pier. With newel piers there are two key options. The first option is to run the handrail into the newel pier shaft or alternatively into the pier cap.
